Product Description

Product Description

Semi Automatic 400ml 3:1 Dual Component Epoxy Sealant Empty Cartridge Filling Machine

It's semi-automatic, the worker has to put the empty cartridge in the machine and take the full cartridge away.

The material is filled into the cartridge by the air pump.

The filling pump needs to be "With tube, then filling, no tube, no filling", it can eliminate errors when filling.

For the total filling volume and filling accuracy, they are adjustable. But due to the single acting cylinder, there would be errors existing for the two tubes.

The tube is rising up while filling. There will be no visible bubbles in the material pipe after finishing filling.

For the tube's pistons which are without exhaust plug, we use wire to exhaust. And for the tube's pistons which are with the exhaust plug, we will use another way for filling.

For the filling machine, there is a device specially for putting pistons. When there is no piston, the alarm rings, then the device stops operating.
